

ABSTRACT

The invention creates a method and a corresponding apparatus for an additional call setup for data transmission between a second data receiver 2' and a data transmitter 1 via at least one mobile telecommunications system 3, having the following steps: allocation of resources of the air interface 30 to the data transmitter 1, and construction of a certain configuration of the data transmitter 1 by means of the controller device 31 in the first call setup; storing the resource occupation and configuring the data transmitter 1 of the first call setup in the memory device 10 of the data transmitter 1; and sending an identification message 7 from the controller device 31 to the data transmitter 1 in the additional call setup, to call up the resource occupation and configuration of the data transmitter 1, stored in the memory device 10, for a new allocation thereof in the additional call setup.
